

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A tilting organizer comprising
a base section for mounting to a surface, wherein said base section includes a sidewall having a groove formed therein;
a supply section having a plurality of compartments to store articles, wherein said supply section ~~and said base section are movably connected to one another~~ includes a plurality of walls forming the compartments and an arm protruding from an exterior wall aligned with the sidewall having the groove, wherein the arm and the groove engage to movably connect said base section and said supply section, wherein the arm has protrusions extending from an outer edge, and
wherein said supply section can be extended out from said base section and then rotated to provide access to the plurality of compartments.
2. (Original) The tilting organizer of claim 1, wherein neither said base section nor said supply section has any movable parts.
3. (Original) The tilting organizer of claim 1, wherein said base section and said supply section are each a single unit.
- 4-5. (Canceled)
6. (Original) The tilting organizer of claim 1, wherein opening to the compartments is on top of said supply section, and said supply section rotates downward once extended out from the base section.
7. (Original) The tilting organizer of claim 1, wherein said supply section can extend out of base section forward and backward.
8. (Original) The tilting organizer of claim 1, wherein the compartments are formed

in some combination of top, front and side of said supply section.

9. (Original) The tilting organizer of claim 1, wherein said supply section can rotate upward or downward.

10. (Original) The tilting organizer of claim 1, wherein said base section and said supply section are made of a rigid material.

11. (Currently Amended) The tilting organizer of claim 10, wherein the rigid material is a plastic.

12. (Currently Amended) The tilting organizer of claim 1, wherein said supply section can rotate at different angles ~~angels~~.

13. (Original) The tilting organizer of claim 5, wherein the groove is formed through the sidewall.

14. (Original) The tilting organizer of claim 5, wherein the groove is formed in an inner surface of the sidewall.

15. (Original) The tilting organizer of claim 5, wherein the arm is a rod.

16-21. (Canceled)

22. (Original) A tilting organizer comprising:

a base including at least a bottom and a side, wherein the side has a groove formed therein, the groove extending vertically downward from an upper edge to a stationary point, the groove extending horizontally forward from the stationary point and then extending diagonally up and forward, the groove ending at a tilting point at end of portion extending diagonally up and forward; and

an organizer having a plurality of compartments formed therein, wherein the organizer has an arm formed in a side thereof, the arm capable of engaging the groove and moving within the groove in order movably engage said base and said organizer.

23. (Original) The tilting organizer of claim 22, wherein when the arm is located at the stationary point said organizer is within said base.

24. (Original) The tilting organizer of claim 22, wherein when the arm is located at the tilting point said organizer is extended out from said base and is tilted downward to provide access to the compartments.

25. (New) A medicine cabinet organizer comprising
a supply section having a plurality of compartments to hold and organize items, wherein said supply section includes two parallel exterior walls, and wherein each of two parallel exterior walls has an arm protruding therefrom; and

a base section, mountable in a medicine cabinet, to house and movably engage said supply section, wherein said base section includes two parallel sidewalls, wherein each of the two parallel sidewalls has a groove formed therein for receiving a corresponding arm, wherein the grooves extend horizontally along the sidewalls so that when the arms are moved horizontally within the grooves said supply section slides out of said base section, and wherein the grooves have an angled portion toward a front edge of said base section so that when the arms are moved within the angled portion said supply section is tilted down to provide access to the plurality of compartments.

26. (New) The medicine cabinet organizer of claim 25, wherein the compartments enable items not capable of standing vertically on their own to be stored vertically.

27. (New) The medicine cabinet organizer of claim 25, further comprising dividers to removably place within the compartments to form sub-compartments.

28. (New) The medicine cabinet organizer of claim 25, wherein the angled portion slopes upward so that when the arm follows the groove it lifts a portion of said supply section upwards which in turn causes a portion of said supply section extending from said base section to tilt downwards.

29. (New) The medicine cabinet organizer of claim 25, wherein said base section includes a back wall that is secured to a back wall of the medicine cabinet.

30. (New) The medicine cabinet organizer of claim 25, wherein said base section includes a floor that is secured to a shelf of the medicine cabinet.

31. (New) The medicine cabinet organizer of claim 25, wherein said base section and said supply section are fabricated from plastic as single components.

32. (New) The medicine cabinet of claim 25, wherein said supply section includes a thumb tab on a front edge thereof for enabling a user to easily grab said supply section.
